

Growing Your Comfort Zone With Ecolux™ 70

Meet the next generation in low-emissivity window film, Ecolux 70. Its technology is sophisticated, but what it does is simple. Dual-action Ecolux 70 helps keep the heat out in the summer and reflects heat back into the room in the winter.

Solar Gard® Ecolux™
Feel Good Inside.

Using NFRC standard conditions, we can calculate the temperature you feel 1 meter away from a window in both summer and winter. If you find yourself pulling your desk or couch away from the windows to avoid the extremes of both seasons, Ecolux 70 is your answer, and here's why.

Winter

The standard winter conditions are -18 C outside and 21 C inside. Even with your thermostat set to 21 C, 1 meter away from a single pane window you will feel like it's 17 C. Once Ecolux 70 is installed, you will feel like it's 21 C, the same as the rest of the room. Unlike traditional solar control window films, Ecolux 70 keeps working when the sun goes down, 24 hours a day. With Ecolux 70, you can take back the areas near the window and grow your comfort zone.

Summer

The standard summer conditions are 32 C outside and 24 C inside. For these calculations, we'll assume there is no direct sunlight on the window. With your thermostat set to 24 C, you still feel 25 C at 1 meter from a single pane window. With Ecolux 70, this is brought down to 24 C. The comfort improvement grows substantially when the sun is beating on your window. If you'd like to know more, ask your Ecolux specialist for more information on the solar control properties of Ecolux 70.

Winter	Single Pane		Double Pane		
	Clear	Ecolux 70	Clear	Ecolux 70	Low E Glass
Inner glass	-9 C	-13 C	7 C	0 C F	11 C
Emissivity	0.84	0.09	0.84	0.09	0.84
Feels like (at 3 ft)	17 C	21 C	19 C	21 C	20 C

Summer	Single Pane		Double Pane		
	Clear	Ecolux 70	Clear	Ecolux 70	Low E Glass
Inner glass	34 C	43 C	36 C	56 C	33 C
Emissivity	0.84	0.09	0.84	0.09	0.84
Feels like (at 3 ft)	25 C	24 C	26 C	25 C	25 C

Energy Savings

The information above is assuming you are already keeping your interior air temperature at 21 C in the winter and 24 C in the summer. Having Ecolux 70 on your windows will significantly lower the demand on your HVAC system to maintain the set temperatures, so not only are you more comfortable in your own building, you are spending less to keep it that way. If you are interested in a detailed analysis of the energy you can save, ask your Ecolux specialist how to get a custom energy analysis done on your building today!
